

Bird Patterns

~ABAB~

Created by Honey Brown

Introduction

We are not talking about bird migratory patterns here. We are talking about simple patterns that every child should be familiar with. I don't like worksheets because I have very hands on children who need to interact with the things they are learning. I have created this package as a way for my children to interact with patterns.

In this package there are ten pages of patterns and 1 page of pattern pieces. The pages and pieces can be laminated to be used over and over again.

Blessings
